DETAILS FEATURES CHANGELOG

GitLens — Supercharge Git in VS Code

Understand any line of code, keep every branch, worktree, and coding agent in view, and ship cleaner history — without leaving VS Code.

GitLens is an open-source extension built and maintained by GitKraken, and installed more than 51 million times.

Your repository moves faster than it used to. Coding agents open branches, worktrees pile up, and pull requests stack while you're still reading a diff. GitLens pulls all of it into one interactive view history, working changes, branches, worktrees, and live agent activity together — then helps you

CHANGELOG

Microsoft Visual Studio Live Share

Visual Studio Live Share enables you to collaboratively edit and debug with others in real time, regardless what programming languages you're using or app types you're building. It allows you to instantly (and securely) share your current project, and then as needed, share debugging sessions, terminal instances, localhost web apps, and more! Developers that join your sessions receive all of their editor context from your environment (e.g. language services, debugging), which ensures they can start productively collaborating immediately, without needing to clone any repos or install any SDKs.

Additionally, unlike traditional pair programming, Visual Studio Live Share allows developers to work together, while retaining their personal editor preferences (e.g. theme, keybindings), as well as
